

Florida Statewide Prevention Quality Indicators Initiative

Florida's Local Health Planning Councils are currently involved in the Florida Statewide Prevention Quality Indicator Initiative to identify and reduce avoidable hospital inpatient admissions and inappropriate emergency room visits that could have been prevented had quality primary care and preventative services been accessible.

Health Council of South Florida (HCSF) is collaborating with Broward Regional Health Planning Council, the lead agency, Memorial Healthcare System, North Broward Hospital District, the Institute for Child Health Policy at Nova Southeastern University and NEX Consulting, LLC to examine avoidable hospital admissions and inappropriate emergency room visits and develop intervention strategies.

More detailed information and an online interactive database, which is currently under development, is available at <http://www.brhpc.org/brhpc/PQI/pqipress.aspx>. It is anticipated that the online database will be fully functional by June 2009.
