## Introduction

---

This document is a tool to help individuals maintain a healthy lifestyle and lower the risk for heart disease, stroke (brain attack), and diabetes. Research has shown lifestyle habits related to a well-balanced diet, regular physical activity, and control of environmental exposures are important elements for beginning a personal wellness program to live healthy.<sup>1,2,3,4</sup>

The community resource inventory initially released in 2005 and updated in 2006 displays community health promotion and education resources to support healthy lifestyles and lists organizations that offer access to health screening and treatment services in Miami-Dade County. Many community programs are available throughout the county. Collectively, they have engaged more than 30,000 residents in raising awareness of healthy choices to prevent and manage chronic diseases. The following inventory of community resources does not represent all existing private or public not-for-profit organizations conducting local health promotion programs. The guide does, however, offer relevant information on a broad array of options to help individuals improve their health through the incorporation of periodic and sustainable healthy lifestyle practices.

*Wellness is a constant and deliberate effort to stay healthy with the goal of reaching the highest potential of well-being.<sup>4</sup>*

### *Medical Advice*

*It is strongly recommended that one seeks medical advice from a doctor or an appropriate licensed health professional before starting any physical activity or diet program.*
